Canon

WHY PEN TESTING VENDOR ROTATION MATTERS

Today's threat landscape evolves constantly — your security testing should too. Relying on one penetration testing provider can create blind spots and predictable results. Review and rotate vendors on a regular schedule, such as annually or semi-annually, based on your organization's security requirements, risk assessments, and the evolving threat landscape.

Fresh Eyes, Sharper Results

New testers bring different skills and can spot what others missed.

Modern Technology

Different providers can use different tech, helping to keep pace pace with AI and bot-based threats.

Benchmarking

Comparing providers across cycles helps you set clear security standards.

Budget Efficiency

Regular rotation helps keep pricing competitive and optimizes spend.

Breach Prevention

Testing real attack scenarios now is far cheaper than dealing with a breach later.

Canon, through it's Managed IT Services Partner Supra ITS is ready to be that rotation partner — unbiased, comprehensive reporting ranked by criticality, built to align with compliance and cybersecurity insurance requirements.
