## SERVICING OF DOUBLE-INSULATED PRODUCTS

In a double-insulated product, two systems of insulation are provided instead of grounding. No grounding means is provided on a double-insulated product, nor is a means for grounding to be added to the product. Servicing a double-insulated product requires extreme care and knowledge of the system, and is to be done only by qualified service personnel. Replacement parts for a double-insulated product must be identical to the parts they replace.

## INFLATION

**NOTE: BED MUST BE AT ROOM TEMPERATURE PRIOR TO INFLATING OR IT MAY CAUSE AIR LEAKS.**

- Place your rolled-up bed on the floor or other surface free of obstructions or sharp objects.
- Before inflation, make sure flapper inside valve is closed (see figure A). If not, pull red bar firmly to close. Then, twist valve cover securely on (see figure B).
- Plug into any standard polarized 110 Volt AC electrical outlet. North American Electrical rating: 120 VAC 60HZ 1.2A (Note: 230VAC product sold outside of North America). This product has a polarized attachment plug (one blade is wider than the other) as a safety feature (see figure E). This plug will fit into a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. Never use with an extension cord unless the plug can be fully inserted. Do not attempt to defeat this safety feature.
- Turn dial on pump to "auto inflate" position (see figure F). Bed will begin to inflate automatically. Pump will automatically shut-off once the bed is fully inflated. Time to auto stop inflation will vary according to room temperature.
- Once bed is fully inflated and pump has shut itself off, turn dial to "off" position.
- Lie on bed and check the firmness. If you want your bed to be softer, press the rubber flap inside the valve (see figure C).
- If you want your bed to be **FIRMER**, turn the dial on pump to "firmer" position (see figure G). Once desired firmness is achieved, turn dial to "off" position.
- This bed is equipped with auto reset. If run continuously for more than 5 minutes, pump will reset. Unplug and shut off. Wait 15 minutes before turning pump on to adjust firmness.**

## DEFLATION AND STORAGE

- Open the Rapid Release valve cover and press the rubber flapper inside the valve to the locked open position to release the air (see figure D).
- Fold sides of bed into the center along its length (see figure H). Tightly roll your bed towards the valve.
- Roll the bed completely until all air is expelled. When the bed is completely rolled, turn valve cap clockwise until it is locked in place.
- Slide the duffel bag over your AeroBed. Store your bed and pump until its next use.
