THE CURRENT STATE

**80%** of CIOs are exploring AI implementation.[1]

45% of executives say they've increased their investments in AI.[3]

55% of all data analysis by deep neural networks will occur at the point of capture in an edge system by 2025.[3]

SOLUTIONS

Inference is the difference

Training AI models can be a challenge and resource-constraining for most organizations attempting to develop new AI solutions. However, many leaders are using AI inference models built from existing trained models and are incorporating proprietary dynamic data that transforms the business with custom insights. This approach lowers the barriers that made AI seem unattainable.

1

Unlock data insights faster.

Using smarter AI inferencing, organizations get actionable insights in a fraction of the time while lowering processing demands.

2
Ensure success with AI transformation expertise.

Lenovo provides dedicated AI expertise and resources to ensure you get the most from your AI implementation.

3

Accelerate proven deployment solutions.

With an ecosystem of leading validated AI Innovators, organizations can accelerate their AI strategies.

Discover how to put the power of AI inferencing to work for your organization with solutions like the Lenovo ThinkSystem SR650 V3, powered by 5th Gen Intel® Xeon® Scalable processors.

With Lenovo ThinkSystem servers powered by 5th Gen Intel® Xeon® Scalable processors purpose-built for AI inference, your AI initiatives become more accessible to all with lower costs.

Optimize performance on open standard tools you already use, lower energy demands, lessen risk, and speed up deployments — everywhere.
