In today’s fast-paced technological environment, cloud-native technologies like containers and Kubernetes have matured rapidly. They have become the preferred way to build and deploy software and are now mainstream at scale across industries. By leveraging best-in-class container offerings from the top cloud providers, Lenovo solutions - powered by up to 4th Gen Intel® Xeon® Scalable Processors with the most built-in accelerators in the market - enable automation, scaling, and manageability, allowing businesses to focus on what matters most.

Implementing Lenovo TruScale hybrid cloud services allows you to manage data and workloads while enabling shifts in capacity as needed. By leveraging Lenovo TruScale hybrid cloud solutions, businesses become more agile to market changes and better able to respond to evolving business needs. Lenovo TruScale hybrid cloud solutions offer improved scalability, allowing businesses to easily scale based on business needs through a pay-as-you-go model. Lenovo TruScale hybrid cloud is an agile, scalable, accessible, and cost-efficient solution that provides businesses with a platform to accelerate innovation, go to market faster, and employment transition to new technologies.

Unlock your Business Value with TruScale IaaS Hybrid Cloud Solutions

Lenovo TruScale infrastructure-as-a-service (IaaS) cloud solutions offer a range of benefits, including reduced operational complexity, increased efficiency, improved scalability, and more. By leveraging TruScale, businesses can enjoy the benefits of the cloud while maintaining control over their data and infrastructure.

Learn more about deploying and running containerized workloads efficiently with Lenovo.

Leverage Lenovo Container Solutions powered by Intel

Leverage Lenovo Container Solutions on Microsoft, AWS and Google platforms

Azure Kubernetes Service on Azure Stack HCI (AKS-HCI) is a Kubernetes-based orchestrator that automates running containerized applications on Azure Stack HCI clusters, simplifying getting started hosting Linux and Windows containers.

Modernize legacy applications with Lenovo Solutions for AWS ECS-A (with AWS)

AWS Elastic Container Service - Anywhere (ECS-A) on Lenovo ThinkAgile VX systems is a container orchestration solution that makes deploying, managing, and scaling containerized workloads easy.

Google Kubernetes Engine provides enterprise level container orchestration and management deployed on proven, familiar infrastructure and technology. By running workloads in these managed containers, the Anthos dashboard provides centralized administration and enterprise-wide visibility.
