Smarter infrastructure for an unpredictable future

The hybrid cloud model has emerged as a clear choice for organizations looking to achieve operational resilience while unlocking innovation.
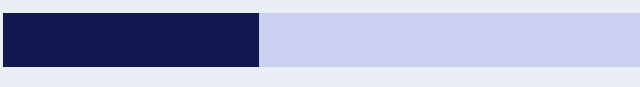

80%
of organizations use hybrid cloud models.[1]

But challenges remain in the implementation.

40%
of ITDMs surveyed say they need better cloud management solutions.[2]

35%
of ITDMs surveyed say they need guidance on cloud strategy.[2]

Lenovo Hybrid Cloud solution with VMware provides a streamlined and innovative path to a modern infrastructure environment. Here's how.

Accelerate modernization

35%
of IT leaders say their top transformational priority includes modernizing infrastructure and applications.[3]

~ 60%
of IT leaders are focused on improving growth, scalability, and flexibility to match business needs.[4]

Lenovo's best-in-class ThinkAgile VX HCI platform

Powered by VMware Cloud Foundation, ThinkAgile VX provides a secure, scalable, flexible architecture to run applications. This integrated solution enables seamless orchestration across cloud and on-premises platforms.
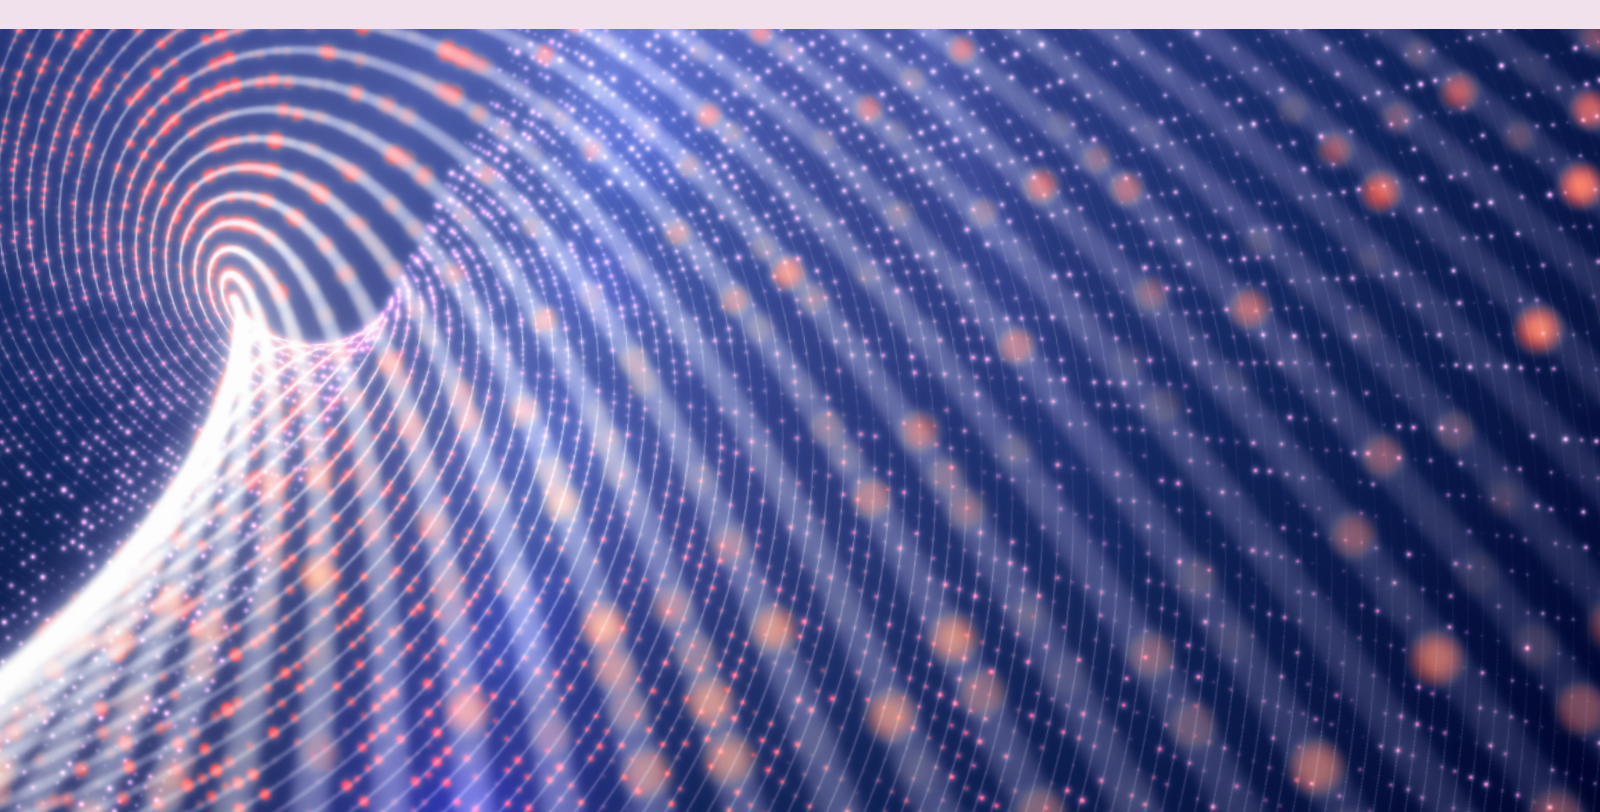

Minimize expenses by choosing the platform that best suits each application workload.

Migrate applications from public cloud to on-premises and vice versa, or from one cloud service to another, utilizing the latest virtualization and container services.

Run apps anywhere without the complexity of app rewriting.

Simplify implementation

41%
of CIOs expect their technology vendors to help simplify configuration, deployment, and maintenance.[5]

Make provisioning, deployment, and administration fast and easy with hyperconverged preconfigured infrastructure.

With Lenovo ThinkAgile VX Series powered by VMware Cloud Foundation, customers can realize up to a 75% reduction in time to deployment.

Management and orchestration tools like VMware Aria and Lenovo XClarity provide single-pane-of-glass management capabilities, removing complexity and speeding up response time.[6]

Reduce IT workloads

84%
of data teams describe their current workload as beyond their capacity.[6]

61%
of CIOs say managing fragmented IT vendor ecosystems is among the most difficult challenges to solve.[5]

Lenovo TruScale Hybrid Cloud with VMware optimizes operational workloads by delivering an as-a-service solution. TruScale IaaS incorporates secure global management services, professional services, and cloud expertise. TruScale improves resilience, reduces complexity, and frees up IT resources in a scalable, OpEx, pay-as-you-go model.
