Lenovo

**Lenovo Security Services**

# Build total cyber resiliency from pocket to cloud.

Strengthen cybersecurity across every layer of your business with a comprehensive, AI-enhanced, one-stop solution.

**Now that's smarter.**

# Addressing the new threat landscape.

From AI-driven attacks to expertise shortages, businesses face more security challenges than ever.

Attackers are weaponizing AI and many organizations are struggling to keep up. The stakes are sky-high: without effective protection against ransomware, insider threats and supply-chain breaches, businesses risk operational, financial and reputational damage.

As AI adoption accelerates, so do new threats. With AI models handling sensitive data and automating more decisions, unexpected data leakage and governance risks continue to emerge.

For this reason, businesses need skilled security talent like never before. But a global shortage is leaving IT and Security Teams stretched and burnt-out.

## AI-driven attacks are rising.

**90%** of IT leaders are not “very confident” they can address the risk of cyber criminals using AI.<sup>1</sup>

## AI adoption is challenging.

**70%** of IT leaders agree the misuse of AI by employees is a critical risk, while just **48%** feel fully confident in addressing the risks emerging from AI adoption.<sup>2</sup>

## Skills gaps remain.

**83%** of executives cite skill gaps as a barrier to sustaining a secure posture.<sup>3</sup>

## Total resiliency, whatever the threat.

With Lenovo Security Services, you can maximize your organization’s cyber resiliency with confidence while protecting your sensitive data.

End-to-end capabilities, offered in one service model, means you have a consolidated security stack that strengthens defenses with AI-enhanced security capabilities that build resiliency at scale.

### Complete your defenses.

Plug skills gaps and protect every layer of your business while reducing fragmentation and improving visibility of your entire IT stack.

### Reinforce for the future.

Stay ahead of new threats with advanced threat intelligence, Managed Detection and Response (MDR) and a dedicated Global Security Operation Center (SOC).

### Operate with confidence.

Reduce risks and ensure continuity at scale with trusted end-to-end Managed Services for security.

Backed by Lenovo’s market-leading partners.

# End-to-end security with one unified framework.

Lenovo's AI-enhanced security services are underpinned by our Cyber Resiliency Framework.

The comprehensive solution safeguards your entire cybersecurity lifecycle. It includes Advisory Services, where Lenovo assesses your current cybersecurity posture to identify your requirements, plus Implementation & Configuration and Managed Services. Together, the services are designed to make defenses adaptive, robust and able to scale to changing needs.

The Implementation & Configuration and Managed Services cover:

- Access & Trust Management
- Digital Data Protection & Resiliency
- Visibility & Risk Management
- Managed Extended Detection & Response (MxDR)
- Security for AI\*

\*Available soon

## Total cybersecurity.

- **Augment your teams' capabilities and accelerate threat responses** with AI-enhanced, 24/7 global security monitoring provided by a dedicated Global SOC staffed with certified security experts.
- **Strengthen your device security** starting from below the OS with firmware protections, supply chain assurance and device-level safeguards—extending trust from hardware to the cloud.
- **Optimize your security investments** with Lenovo's AI-enhanced security offering that improves efficiency and optimizes your security spend.

## Total preparation.

- **Stay ahead of AI attacks** with advanced Managed Detection and Response (MDR) capabilities, reinforced by AI and layered defenses.
- **Harness AI securely** with our expert guidance to help build guardrails that protect sensitive information, uphold compliance and reduce risks.
- **Future-proof security spending** by locking in software license prices for your devices at an optimized cost, helping ensure predictable spend.

## Total trust.

- **Get tailored consultative guidance** from dedicated security experts who design strategies matched to your exact environment.
- **Reduce vendor sprawl** with end-to-end security capabilities from one trusted provider and industry-leading partners—all in one contract.
- **Maintain reliable global operations** with Lenovo's consistent coverage across 180+ markets, aligned to global best practices.

# Backed by trusted partners.

We partner with best-in-class specialists to deliver best-in-class security.

Lenovo's ecosystem of world-leading technology partners ensures that all your hardware, software and managed platform services are protected under one trusted, cost-efficient service model.

## Lenovo | Microsoft

- Lenovo works with your Microsoft Security stack, providing an additional layer of management, expertise and intelligence.
- Leverages combined telemetry data to strengthen visibility, improve attack detection accuracy and boost response times.

### Benefit from:

**Real-time monitoring**

**Faster AI-driven responses**

**Seamless integration**

## Lenovo | ABSOLUTE

- Embeds resiliency directly into the firmware of a device rather than in the OS—enabling continuous visibility and policy enforcement across all devices.
- Ensures consistent protection by providing expert Global SOC support and filtering noise, reducing strain on overstretched IT Teams.

### Benefit from:

**Remote remediation**

**Firmware-embedded protection**

**Expert monitoring**

## Lenovo | SentinelOne

- Industry-leading MDR capabilities monitor systems 24/7, identifying threats in real time and responding before damage is done.
- Get enterprise-grade security without the cost or complexity of building your own SOC.

### Benefit from:

**End-to-end coverage**

**Minimized alerts**

**Financial safeguarding**

## Lenovo | veeam

- Managed backup and recovery service delivered through Lenovo TruScale and Veeam.
- Provides data protection services across hardware, software and managed platform environments for on-premises or co-located deployment.

### Benefit from:

**Faster data recovery**

**Less IT complexity**

**Total data sovereignty**

# Time for total cyber resiliency from pocket to cloud.

Embed unmatched speed, expertise, scale and strength in your cybersecurity today.

## Proactively defend against evolving threats.

Safeguard your organization with AI-enhanced security solutions that deliver adaptive protection and rapid recovery across complex environments.

**Over 80%** of low-level incidents resolved without analyst intervention.<sup>4</sup>

**85% predictive accuracy** for common endpoint and IT failures with Lenovo ThinkShield Zero Trust.<sup>5</sup>

## Streamline your protection.

Lenovo augments in-house Security Teams and reduces alert escalations, freeing up your IT Teams to focus on strategic priorities.

**With Lenovo's Global SOC, you're protected by:**

**24x7x365** monitoring and response.

**Certified experts** across the globe.

## Build resiliency at scale.

By safeguarding every layer of the enterprise from pocket to cloud, Lenovo enables compliance, operational continuity and total trust across the digital ecosystem.

**Multi-layered protection** across hardware, firmware and software with Lenovo ThinkShield.

**180+ markets** covered, with regulation-aligned security services mapped to GDPR, HIPAA, ISO 27001, EU AI Act, NIST AI RMF, and NIST CSF standards.<sup>6</sup>

# Ready for total cyber resiliency?

Build speed, expertise, scale and strength in your cybersecurity today—so you thrive in a workplace without limits.
