Lenovo Global Data Vault Management

Secure data. Smarter global operations.

Lenovo Global Data Vault Management is **Lenovo's data residency and governance solution,** designed to protect sensitive information while enabling organizations to operate globally—without the cost and complexity of replicating infrastructure across regions.

Why this matters

As data regulations become stricter across regions, organizations are often forced to replicate systems to meet residency requirements—driving cost, complexity, and operational overhead. Lenovo Global Data Vault Management addresses this by keeping sensitive data in-region while enabling global applications and workflows to operate seamlessly.

What it does

- Keeps sensitive data stored and secured within regional vaults
- Enables global applications to access only tokenized or controlled data
- Applies fine-grained access controls based on roles, policies, and context
- Provides full auditability and monitoring for compliance and governance
- Integrates with ServiceNow and other enterprise platforms

Why it's different

Lenovo Global Data Vault Management is not just a data protection tool—it's a smarter way to architect global operations. By combining centralized governance with regional data vaults, it eliminates the need to replicate entire environments across geographies—reducing cost, complexity, and operational overhead.

This is for you if...

- You operate across multiple regions with strict data residency requirements
- You want to reduce compliance costs and audit overhead
- You need to protect sensitive data without slowing down operations
- You're looking to expand globally without rebuilding infrastructure
- You want stronger control over who can access what data—and where

Explore what's possible with Lenovo Global Data Vault Management today.
