Data protection for Microsoft Office 365

Lenovo + Veeam control and protect Microsoft Office 365 data

**The challenge of Microsoft Office 365**

Microsoft provides a wide array of powerful services within its Microsoft Office 365 productivity suite, but a comprehensive backup of your Office 365 data is not one of them.

**Lenovo and Veeam® Backup for Microsoft Office 365** eliminates the risk of losing access and control over your Office 365 data, including Exchange Online, SharePoint Online, OneDrive for Business and Microsoft Teams, so that your organization's critical data is always protected and accessible.

**With Microsoft Office 365, it’s your data**

Office 365 enables your organization to work anywhere and anytime without the need to host your own email, files and content management infrastructure. Even though Microsoft hosts the infrastructure, this doesn’t replace your responsibility of maintaining a backup of your business-critical Office 365 data.

With Office 365, it’s your data, you control it, and it is your responsibility to protect it. With Lenovo and Veeam Backup for Microsoft Office 365, you can:

- **Protect your Office 365 data** from accidental deletion, security threats, and retention policy gaps
- **Quickly restore** individual items and files with industry-leading recovery flexibility
- **Meet legal and compliance requirements** with efficient eDiscovery of Office 365 backup items.

**Flexible Microsoft Office 365 data protection**

- Multiple repository and recovery options
- Leverage on-premises storage, the cloud or S3 object storage for optimal cost
- Efficient scalability with multi-repository, multi-tenant architecture and comprehensive automation
- At-rest data encryption and fast backup performance for Office 365 data platforms

Meet security and compliance requirements  
Scale efficiently and minimize overhead  
Manage hybrid cloud Microsoft Office 365 environments
Back up Microsoft Office 365 on-premises or in the cloud

- Retrieve Office 365 Exchange Online, SharePoint Online, OneDrive for Business and Microsoft Teams data from a cloud-based instance of Office 365. Uniquely back up your data weekly, daily or as often as every five minutes in Microsoft’s native format, an archive database based on Extensible Storage Engine (ESE), also known as the Jet Blue database.

- Store backups in the location of your choice, including on-premises ThinkSystem DE and DM SAN storage, in a hyperscale public cloud (i.e., Microsoft Azure or AWS) or with a local service provider.

- Protect data that’s posted and shared with Microsoft Teams chats, files and sites, since Teams data is journaled into Exchange Online and SharePoint Online.

Restore data with industry-leading recovery flexibility

Reliable, granular restore of Office 365 email items, SharePoint sites, documents, libraries and lists, as well as OneDrive for Business accounts, files and folders in just a few simple clicks. Quickly search and perform granular recovery of individual objects and directly restore Office 365 items.

Achieve greater IT efficiencies with Lenovo data management infrastructure

ThinkSystem DE All-flash and hybrid-flash arrays deliver the perfect combination of performance and economics to handle Office 365 backup copies. The ONTAP-enabled ThinkSystem DM-series offers advanced data orchestration capabilities with native cloud-tiering and immutable snapshot technology.
