9. 360° Tangle-Free Swivel Cord
10. See-Through Water Reservoir / Maximum Fill Line
11. Self Clean Button
12. Soleplate

Using Your Iron

Filling The Water Reservoir *(use tap water)*

1. Make sure the iron is unplugged. Set the Steam Lever to (Dry).
2. Lift the Covered Water Fill Hole to Reservoir.
3. Pour tap water into water reservoir, using the easy-pour cup included with your iron.

WARNING: To prevent the risk of burns, be careful when filling a hot iron with water. Hot metal parts, hot water and steam can cause injuries.

Dry Ironing

1. Make sure the Steam Lever is turned to the (Dry) setting.
2. Plug the cord into a 120-Volt AC outlet.
3. Press the +/- buttons to select desired Fabric Setting. Allow the iron to heat until wait/ready light turns green indicating the unit is ready. While the iron is heating, make sure it is sitting on its heel rest on a stable, protected surface.

NOTE: While the Steam Lever is turned to the (Dry) setting, you may still use the SHOT OF STEAM™ or SPRAY MIST™ feature, as long as the fabric setting is set to wool, cotton, or linen. Please make sure the water reservoir is approximately ¼ full of water.

Steam Ironing

1. Follow the instructions for "Filling the Water Reservoir."
2. Plug the cord into a 120-Volt AC outlet.
3. Press the +/- buttons to select desired fabric setting. Allow iron to heat until Wait/Ready light turns green indicating the unit is ready. While the iron is heating, make sure it is sitting on its heel rest on a stable, protected surface.

IMPORTANT: When not ironing, always set the Steam Lever to (Dry) and the Fabric Select Buttons to OFF.

Caring for Your Iron After Use

Turning Off Your Iron

Turn the Steam Lever to (Dry) and press the Fabric Select Buttons until OFF is illuminated. Unplug the iron from the power source.

WARNING: NEVER yank the power cord when unplugging the iron. This can damage the cord.

Storing Your Iron

1. Turn off iron following instructions above. Allow the iron to cool.
2. **If you do not use your iron on a daily basis, empty the water reservoir after each use for a longer iron life.** To do so, unplug the iron, turn the iron upside down, open the fill hole cover, and allow water to flow from the fill hole. Shake the iron gently to remove trapped water drops.
3. Loosely loop the power cord around the heel rest and store the iron on its heel rest.

IMPORTANT: Wrapping the cord around the iron too tightly can damage the cord.
