Iguanas can grow up to six feet in total length. Some young iguanas are bright green, which helps camouflage their bodies in the green leaves of the rainforest. Iguanas come in different color variations such as red or blue.

**facts**

- **average adult size:** 4 to 6 feet long, depending on species
- **average life span:** 15+ years with proper care
- **diet:** herbivore

*Will reach adult size in 2 to 3 years, under ideal conditions; upgrade habitat size as your reptile grows.*
red flags
- Weight loss or decreased appetite
- Mucus in mouth or nose
- Swelling
- Lethargy
- Bumps, sores or abrasions on skin

housing
- Size - Appropriately sized and shaped habitat with secure cover; as the iguana grows, a larger habitat will be required. The iguana should be able to freely turn and move around in the habitat.
- Habitat - Provide a hiding area; branches for basking. Maintain 70 to 90% humidity by misting as needed every day.
- Substrate - Use a mulch type such as coconut fiber.
- Temperature - Temperature gradient (100°F for the warm end and 80°F for the cool end). Use an incandescent light or ceramic heater as primary heat source.
- Lighting - UVB rays with full spectrum lighting for 10 to 12 hours a day is required. An incandescent day bulb can be used for basking area during daylight hours only; can use a ceramic heater or nocturnal or red incandescent at all hours.
- House adult male iguanas separately and do not

normal behavior
- May become tame with daily handling.
- Bob their head as a means of communication.
- Males may become territorial.
- Healthy iguanas sneeze to rid their bodies of excess salt.

habitat maintenance
- Thoroughly clean and disinfect the habitat at least once a week; place iguana in a secure habitat; scrub the tank and furnishings with a 3% bleach solution; rinse thoroughly with water, removing all traces of bleach smell; dry the tank and furnishings completely and add clean substrate.

grooming and hygiene
- Iguanas regularly shed their skin; ensure humidity of habitat is at appropriate level to allow proper shedding. To facilitate shedding, bathe in a large container that allows the iguana to immerse its entire body or provide a shed box, a hide box with sphagnum moss, that will aid in the shedding process.
- Trim an iguana’s nails as needed.

signs of a healthy animal
- Active, alert and interested in humans
- Clear eyes
- Body and tail are filled out
- Healthy skin
- Clean vent
- Nose is free of discharge, aside from their salt excretion
- Eats regularly

If you notice any of these signs, contact your veterinarian.

Ask a store partner about Petco’s selection of books on iguanas and the variety of private brand products available for the care and happiness of your new pet. All private brand products carry a 100% money-back guarantee.

Because all reptiles are potential carriers of infectious diseases, such as Salmonella, always wash your hands before and after handling your reptile or habitat contents to help prevent the potential spread of disease.

Pregnant women, children under the age of 5, senior citizens and people with weakened immune systems should contact their physician before purchasing or caring for reptiles and should consider not having a reptile as a pet.

Go to cdc.gov/healthypets and petco.com/caresheet for more information about small animals and disease.

This Care Sheet can cover the care needs of other species. Go to petco.com for more information.
