8" x 8"	225	155
8" x 20"	330	225
8" x 36"	360	250
8" x 48"	480	270
12" x 12"	330	225
12" x 24"	450	315
24" x 24"	675	450
Pebbles	Varies by sheet: 20-35	

Application Tips

- Be cautious when using Excel Sanded Grout with polished marble or limestone as Excel contains aggregate which may scratch the surface.
- Do not use Flexible Admixture or other latex products to mix Excel.

Steps to Using Excel Sanded Grout

1. Select grout color and add to specified volume of water. Mix until smooth.
2. Apply grout and use a grout float at a 45 degree angle to spread and remove excess grout from the face of the tile.
3. Use a lightly damp sponge to clean off excess grout from the tile; be sure to avoid watering down the grout which may change the color.
4. Let the grout cure for 4 hours. Excel grout is stain resistant without the need for sealing.
5. Apply caulk around fixtures, along terminating edges, and any inside corners between tile.

[Always add powder into liquid when mixing.]
