

PRISMA HOME SOLUTIONS

DEVICE GUIDE

PRISMAlytics Dashboard v2

PRISMAlytics Dashboard is a simple cloud-based production management information tool which is designed to help provide insightful overviews of print production engines, monitoring performance and helping customers maximize the productivity of their print operation.

PRISMAlytics Accounting

PRISMAlytics Accounting retrieves device data directly from supported PRISMAsync-driven digital presses and provides preformatted reports that can be quickly viewed or exported for tracking, cost analysis, billing, charge-backs, and business planning.

PRISMAprepare Go + PRISMAsubmit Go

PRISMAprepare Go is designed to enhance the ability of small to mid-size print service providers to receive jobs from their customers, prepare the jobs for production, and release the jobs to their printers and set their production operation to "GO" status.

The table provides an overview of printer support levels referenced in the supported print list below.

NOTES:

- Although there is no media catalogue available in PRISMAprepare Go, there is the possibility to retrieve media from the media catalogue on the engine controller. This is dependent on the capabilities of the print server. For Canon PDL print server there is a limitation, only media which has been assigned to an input tray can be retrieved from the print server.
- JDF/JMF support is mandatory for Canon and EFI (Fiery) controllers.
- For EFI (Fiery) print server, this means the automation package is mandatory and, for Canon PDL, the JDF parser.
- For PRISMAsync you have to enable JMF support.

Supported Features	Level of Printer Support				
	A	B	C	D	E
Layout	✓	✓	✓	✓	✓
Media selection	X	✓	✓	✓	✓
Inserts	X	X	✓	✓	✓

PRISMAremote Monitoring

PRISMAremote Monitoring is a cloud-based print operation alerting app for Android and iOS compatible tablets and phones. It not only shows you what's going on, but also alerts you to what actions you need to take to help keep production running.

PRISMAcolor Manager

PRISMAcolor Manager helps users with the color output verification and validation challenge with a single web-based tool that works with virtually any CMYK device. The following guide is for the Canon printers support. Manage one device or a fleet of color devices, even in multiple locations, and track and trend performance over time.

imagePRESS Printer	DFE	PcM Download Chart	In-RIP Configurable ICC	PcM i1 Measure with Cloud Connector	PcM Direct Print	Auto Upload Validation CGATS

This document is intended to inform and guide you to understand which series of printers are supported by PRISMA Home Cloud Solutions.

There is an overview provided for each application or tool along with a list of which printers and controllers are supported.

As new printers and devices are released this document will be updated.

All applications and tools contained in this document are subject to change.

¹ This print server is supported; however, it has not been tested because it's compatible with other print servers.

² For Canon PDL print server there is a limitation; only media which has been assigned to an input tray can be retrieved from the print server.

³ At the time of this writing, Image Reader is currently required to enable PRISMAsync SMB Shares which in turn enables PRISMAsync color validation test results in CGATS format to auto upload to PRISMAcolor Manager.

⁴ At the time of this writing, Auto Upload Validation CGATS is currently unsupported due to the unavailability of image Reader (thus SMB Share) for the V1350 engine model.
