CANON'S OUTSTANDING PRINT QUALITY

HIGH RESOLUTION PRINTING

Canon's comprehensive imageFORCE lineup comes equipped with innovative and reliable technology to achieve high-resolution image quality printing—ensuring every print is sharp, detailed, and vibrant. The imageFORCE platform is designed to deliver a seamless and efficient user experience, combining advanced imaging capabilities with robust performance to support a wide range of business needs.

D² Exposure¹ (Defined and Detailed)

Canon's D² Exposure system uses OLED and silicon wafer technology to deliver 4800 x 2400 dpi print resolution. By replacing traditional laser exposure with compact, efficient OLEDs positioned closer to the drum, light reaches the surface more precisely. The result: sharp images, crisp text, and consistently stunning output on every page.

R-VCSEL Imaging Laser

In the imageFORCE 8100 Series, Canon's advanced 32-beam R-VCSEL Imaging Laser helps deliver up to 2400 x 2400 dpi print resolution, delivering detailed black-and-white images with outstanding definition at high speeds.

EXPAND PRINT EFFICIENCY WITH WORKFLOW SOLUTIONS

Manage tasks, track costs, and print and scan all on one platform with the optional uniFLOW Online, a powerful cloud-based solution that is designed to help reduce IT workload and add flexibility to your print environment.

PRINT BETTER

COLOR CONSISTENCY

imageFORCE devices are designed to deliver consistent, high-quality prints. Canon print technology helps ensure every print job meets the same quality standard.

Multi-Density Adjustment Technology¹

To help provide color consistency from the first print to the last in Canon's imageFORCE color models, Canon leverages the Multi-Density Adjustment Technology that scans color patches every few hundred sheets, then will adjust the color density. This results in high color consistency throughout the print job.

Real-Time Adjustment from Estimation

If you require advanced precision, the imageFORCE C7165 offers a Real-Time Adjustment from Estimation feature that collects data and adjusts toner density every five sheets.

Color Management Tools

Canon's imagePASS is a powerful print server that helps to advance the performance of your Canon device and supports professional, high-quality results by enhancing processing speeds, sharpening color accuracy, and providing color management tools. The imageFORCE C7165 and C5100 models offer dual controller support, providing the flexibility of using the Canon controller for everyday print jobs and the imagePASS controller for more advanced workflows.

SHARP AND CRISP TEXT

Canon's imageFORCE platform provides you with clear results. These multifunction printers deliver exceptional precision, fine lines, and crisp text so that every print meets the highest standard of accuracy.

FRONT-TO-BACK REGISTRATION

Engineered with precise front-to-back registration, ensuring alignment on both sides of your prints for polished results. This accuracy is critical for duplex jobs where misalignment can compromise quality. The imageFORCE C7165 and 8100 models include fixing knobs in the lower cassettes, designed to help secure the media plate and help prevent paper from shifting during runs.

PRINT BETTER, BUILT TO PERFORM

Select imageFORCE devices feature Canon's unique and sturdy anti-loosening welded frame, designed to handle long-term usage and promote peak performance.
