

CANON FADGI COMPLIANCE INSTALLATION PACKAGE

The Canon FADGI Compliance Installation Package helps government agencies meet the Federal Agencies Digital Guidelines Initiative recommendations¹ that should be followed when it comes to scanning, processing, and creating digital replicas of permanent hard-copy documents and records.

ON-SITE INSTALLATION

As part of the Canon FADGI Compliance Installation Package, Canon U.S.A., Inc. will replace the firmware of select imageFORMULA scanners with custom firmware designed to generate images that conform to the quality and performance guidelines defined for the FADGI Modern Textual Records category. During the on-site installation, a Canon service technician will install the firmware onto the Canon scanner and configure Canon CaptureOnTouch software².

STREAMLINED VERIFICATION PROCESS

Upon completion of the custom firmware installation provided as part of the Canon FADGI Compliance Installation Package, the Canon service technician will also test the compliance to confirm that the Canon scanner, in combination with Canon CaptureOnTouch software, is now ready to start generating FADGI compliant images. Additionally, a verification report will be supplied via email confirming FADGI compliance.

ELIGIBLE CANON PRODUCTION DOCUMENT SCANNERS

The Canon FADGI Compliance Installation Package is currently available for new and existing Canon imageFORMULA DR-G2110, DR-G2110 USB, DR-G2140, and DR-G2140 USB Production Document Scanners³. To be eligible, the scanners must be in good

working condition and covered either under an eCarePAK Extended Service Plan or a service plan provided by a CUSA Authorized Service Provider.

PEACE OF MIND WITH CUSTOMER CARE

For Canon imageFORMULA DR-G2110, DR-G2110 USB, DR-G2140, and DR-G2140 USB Scanner protection, eCarePAK options are available to extend service beyond the initial 90-day, on-site limited warranty period. This can save on costs associated with post-purchase maintenance and help maximize uptime throughout the product life.

1. FADGI compliance requirements are subject to updates by participating U.S. Federal Agencies. Visit www.digitizationguidelines.gov for the latest FADGI requirements and information.
2. To enable FADGI compliance, the Scanner's driver settings may need to be changed, and Canon CaptureOnTouch software must be installed on the customer's workstation that is connected to the Scanner. The Firmware may affect the scanning speed of the Scanner.
3. The Canon Installation Package for FADGI Compliance cannot be ordered for existing scanners that have already been registered in Canon's Authorized Servicer/Dealer Customer Registration System (ASCR) or with new scanners to be registered in ASCR.
