Collaborate Confidently With Integrated Data Security

Harness the powerful combination of digital rights management and data classification for seamless, end-to-end data protection.

DATA IS EVERYWHERE—SO ARE SECURITY RISKS

The average cost of a data breach in the U.S. is $9.36 million.[1] When your sensitive data travels between the cloud and electronic devices, classification and file-level security become a must.

Secure Your Data No Matter Where It Travels

The purpose of many security policies is to protect data inside the firewall—but what about outside of your organization? Secure Collaboration and Classification software helps to ensure your security policies follow your data, all the way to the device, person, cloud, or application it travels to.

File-level Protection
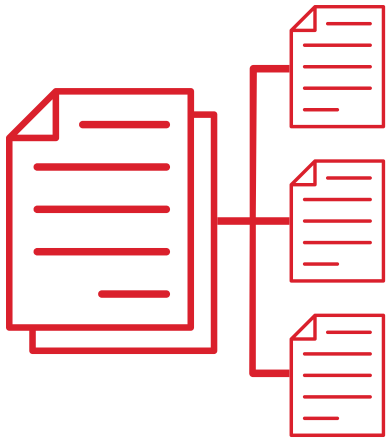

Encrypts	Tracks	Audits	Secures

What if a file falls into the wrong hands? You can revoke access—in real time.

Classify Your Data So You Can Apply The Appropriate Security Policy

It's hard to protect what you haven't identified or classified. Secure Collaboration and Classification is a solution that scans files, assesses the data sensitivity level, and applies visual labels, like confidential, restricted, etc., and metadata to support your information security policies.

Guided: Asks user to confirm classification recommendation

Automated: Automatically applies the recommended classification level

Manually: User applies the classification level

Secure Collaboration and Classification Software Helps Protect Your Data

A Secure Collaboration and Classification solution helps to classify and safeguard your data, providing integrated, end-to-end security.
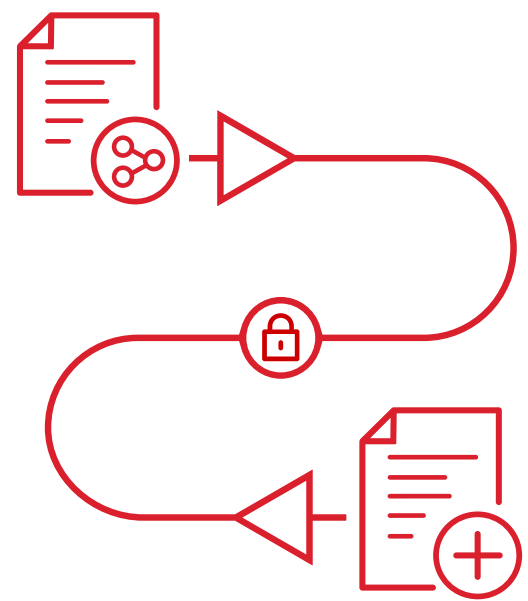

Manage A File

Imagine any one of your emails, spreadsheets, presentations, or other file types as it's classified and secured before being shared.

First, the file goes to Classification, where the data gets scanned and then classified according to your unique policies. Confidential? Restricted? Done.

Next, the file goes to Secure Collaboration, where it gets encrypted.

You can manage the file all the way to the device or application it's going to.

But what if it lands in the wrong hands? File access can be revoked at any time.

Get Started

A Secure Collaboration and Classification solution offers seamless, behind-the-scenes data classification and protection—so you don't have to change the way you work. You can use your existing storage, collaboration, and communication tools. Learn more about how Canon U.S.A. can provide Big Security solutions to protect your organization's data.

THE 5 PILLARS OF SECURITY

- DEVICE SECURITY
- DOCUMENT SECURITY
- PRINT SECURITY
- **CYBERSECURITY**
- INFORMATION SECURITY

Canon U.S.A. Five Pillars of Security presents a portfolio of cybersecurity products and services in a comprehensive way that groups solutions in functional areas. Cybersecurity is a key component of our Five Pillar approach.
