

COLORADO UV_{gel} WORKFLOW FACTORIES

COLORADO UVgel WALLPAPER FACTORY

The ease and versatility of the Colorado M-series printer brings exceptional features to help scale your business and grow profits by producing more challenging jobs and increasing productivity. Now, we have another game-changing innovation for the large format industry: the **Colorado UVgel Workflow Factories**. Choose from three set-up options of Fotoba stackers, cutters, and rewinders that work effortlessly and further enhance the productivity of the Colorado M-series printers. You'll find that the Workflow Factories are true workhorses designed to function in-line, and when needed, components can be moved off-line for maximum usage throughout the shop.

COLORADO UVgel WALLPAPER FACTORY

The UVgel Wallpaper Factory integrates the Colorado printer with a Fotoba Jumbo Roll Loader, Cutter, and Rewinder for digitally printed wallpaper production. The potential savings to use jumbo rolls and automated features of all components helps make it possible to run jobs 24/7 with minimal operator intervention. The color and dimensional consistency of the Colorado combined with the accurate cutting from the Fotoba cutter helps to deliver high quality wallcovering panels to your customers.

COLORADO UVgel PRINT FACTORY

The UVgel Print Factory helps to both maximize printing efficiency and reduce media load frequency with cost-effective jumbo rolls. Handling 30" diameter rolls up to 880 lbs., this solution helps enable continuous, operator-free print production. The motorized takeup helps keep the jumbo roll squared and self-corrects edges to minimize misalignment. Produce posters, outdoor graphics, decals, back-lits, floor graphics, labels, fleet graphics, window graphics, wrapping paper, framed soft signage, and framed canvas materials.

COLORADO UVgel PACKAGING FACTORY

The UVgel Packaging Factory helps streamline production by bringing print litho-lamination liners in-house. This solution includes printing, cutting, and stacking into a single operation for high-quality preprinted sheets compatible for fiberboard and corrugated packaging. The UVgel ink in the Colorado ensures consistent, high-quality color results on various liner media, enhancing efficiency and output quality in the lamination process. The UVgel Packaging Factory helps reduce turnaround times to meet your customers' critical deadlines.
