# Easy uniFLOW Online User Sign-up and Login with Microsoft 365[1]

Self sign-up for uniFLOW Online is available as an option by default using the following compatible identity providers: Microsoft, compatible email providers, and Google. For user sign-up and log-in with Microsoft 365, simply activate Microsoft 365 within your uniFLOW Online tenant.[1] Once activated by the Administrator, users may then log in using their existing corporate Microsoft 365 accounts.[1]

## How to Connect to Microsoft 365 Accounts

The Administrator will need to approve the connection.

Administrators can customize the log-in page and Microsoft name displayed as the identity provider.

Users can then use their Microsoft 365* account to log in.

*Newly created tenants will have the option active by default.

## Benefits of Logging in with Microsoft 365

Onboarding with Microsoft 365 accounts is enabled by default.

Upon login with Microsoft 365 accounts, users are automatically created, even without provisioning.**

End users and Administrators won't need to familiarize themselves with yet another system for logging into uniFLOW Online.

**Provisioning allows organizations to populate more data fields of the user directly from an access management service such as Entra ID.[1] Provisioning is targeted for larger enterprises that want to manage all their users' details in an access management service.

[1] Subscription to a third-party service required. Subject to third-party provider terms and conditions.
