

# Extended Detection and Response (XDR)

## ELEVATE YOUR CYBERSECURITY WITH THE SUPPORT OF OUR EXTENDED DETECTION AND RESPONSE (XDR) SOLUTION

Cyber threats are becoming more sophisticated and pervasive. Traditional security measures often fall short in providing the comprehensive protection that modern enterprises require. Our Extended Detection and Response (XDR) solution offers an integrated, proactive approach to help safeguard your organization's critical assets beyond traditional endpoint security.

## Why Choose Our XDR Solution?

By integrating multiple security layers—including user accounts, endpoints, networks, servers, and cloud security logs—our XDR solution provides a unified view of your organization's security posture. This holistic approach enables faster detection and response to threats, helping to reduce incident response times and automate common security tasks.

## Key Features of Our XDR Solution

- **LOG MANAGEMENT (SIEM):** Efficiently collect, analyze, and store log data from across your IT infrastructure to support swift detection and response to security incidents.
- **EVENT CORRELATION:** Analyze and correlate events across your IT ecosystem to help uncover complex attack patterns and vulnerabilities.
- **IDENTITY COMPROMISE MONITORING:** Continuously oversee user activities to help prevent unauthorized access and protect sensitive information.
- **REAL-TIME MONITORING:** Gain immediate insights into your Cloud, Network, and Identity security posture, enabling rapid identification and mitigation of potential threats.
- **CLOUD THREAT HUNTING & CONTAINMENT:** Proactively detect and neutralize threats within your cloud environments to support data integrity and availability.
- **THREAT DETECTION:** Utilize advanced technologies to identify a wide array of cyber threats, ranging from malware and Business Email Compromise to sophisticated intrusion attempts and more.
- **COMPLIANCE REPORTING:** Streamline adherence to industry regulations with comprehensive reporting tools that help simplify compliance audits.
- **24/7 SECURITY OPERATIONS CENTER (SOC):** Benefit from round-the-clock surveillance by our team of cybersecurity experts dedicated to detecting and responding to threats to help keep your business safe.
- **SECURITY ORCHESTRATION AND AUTOMATION:** Enhance efficiency by automating routine security tasks, such as user account password resets, so your team can focus on strategic initiatives.
- **THREAT INTELLIGENCE:** Leverage included enterprise-grade threat intelligence feeds to help block known malicious connections in real time.

## Automated Response Capabilities

- **IDENTITY AND ACCOUNT SECURITY:** Automatically detect and respond to suspicious account activities and unauthorized access with real-time account disable, VPN disable, or password reset, if required.
- **CLOUD VISIBILITY & RESPONSE:** Maintain comprehensive oversight of your cloud assets for suspicious activity and help swiftly address potential security incidents.
- **NETWORK RESPONSE:** Implement automatic blocking mechanisms to help prevent malicious traffic and unauthorized network access.
- **DARK NET EXPOSURE MONITORING:** Continuously scan the dark web to identify and automatically mitigate potential exposures of your organization's data.

## TAKE THE NEXT STEP TOWARDS COMPREHENSIVE CYBERSECURITY

Don't let cyber threats compromise your business operations. Contact us today to learn more about how our Extended Detection and Response solution can help provide the protection and peace of mind your organization deserves.
