Analyze print performance via multiple KPI overviews.

View performance as trends and timelines.

Compare performance across multiple compatible presses.

Display information in clear reports.

Export a collection of data for further analyzing.
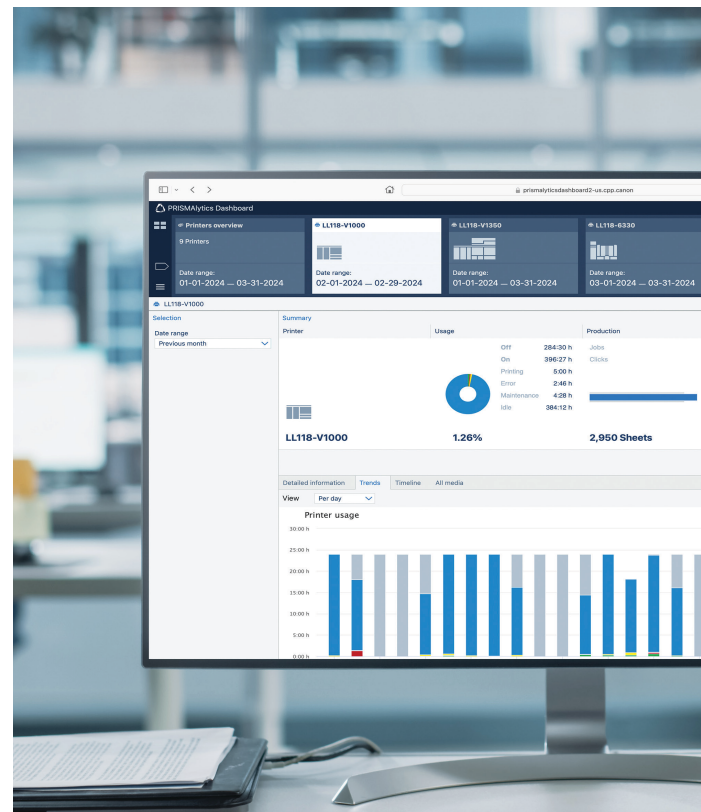

IMPROVE PRODUCTION WITH FACT-BASED DATA
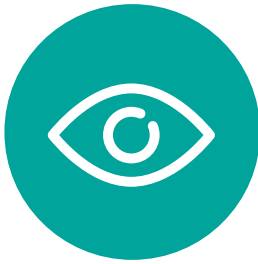

ACCESS VIA THE CLOUD[1]

Data to Drive Your Business

To help reduce costs and optimize productivity, print site managers should know the performance metrics of their presses. PRISMAlytics Dashboard can help enable fact-based decisions for workflow optimization based on actual press data. It can help site managers find ways to reduce turnaround time, waste, and costs, which can lead to better press usage and resource management.[2]

- **Usage Details:** Provides relevant key performance indicators related to engine operation.

- **Timeline:** Helps pinpoint areas for improvement, which can be turned into actionable data.

- **Trends:** Benchmarks operation over time and against historical performance.

PRISMAlytics Dashboard and Accounting now share a common workspace, making the decision to use one or both based on your business needs. Having a unified workspace for both the Dashboard and Accounting can enhance efficiency and flexibility.

# VIEW FLEET PERFORMANCE

MONITOR USAGE DATA

Reliable Data for Cost Allocation and Performance Monitoring

PRISMAlytics Accounting helps production environments to monitor the efficiency of print operations by providing timely and accurate fleet usage and user data of Production and Large Format equipment.[3]
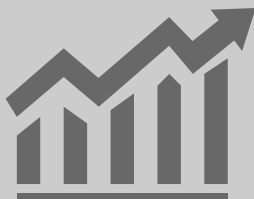

- **Device Reporting:** Collates collected press data into tabulated usage reports that describe total usage, color usage per device, and plexity per device, to name a few.

- **TDS Reporting:** In the AEC (architecture, engineering, construction) environments, work is mostly project oriented and revenue is generated primarily by delivering technical designs and drawings to (internal) customers. To maximize returns from their TDS systems, customers need to keep track of how these printers are used. Customers want to make sure that costs are allocated to the right users, departments, and projects.

- **PRISMAlytics Accounting:** Keeps track of printing, copying, and scanning, helping customers to turn those costs into chargeable income.

- **Report Generation:** Users can choose reports, schedule times, and build a list of email recipients for automatic distribution.

STREAMLINE PRINT REPORTING

The cloud-based PRISMAlytics Dashboard and PRISMAlytics Accounting can offer a comprehensive overview of multiple Canon printers by helping you to analyze print performance and usage through various Key Performance Indicators. With the ability to view data on-screen in intuitive graphs or export the data for deeper analysis, production environments can interpret their operational performance and make necessary adjustments to improve efficiency.

PRISMAlytics Dashboard

PRISMAlytics Accounting

As print service providers look to reduce production costs and improve efficiency, the question remains on how to effectively collect and interpret the performance of their production digital presses.

PRISMAlytics Dashboard is a cloud-based service[1] that collects production data directly from compatible PRISMAsync-driven digital presses. It's then transformed into business-critical information displaying usage-, production-, and consumption-related data in an appealing, comprehensive visual and real-time dashboard.

Timely and accurate business insight on production digital press utilization is an important management resource for print service providers and in-plant print operations. But collecting and organizing this data can be challenging and time-consuming.

PRISMAlytics Accounting[1] retrieves device data directly from numerous production digital presses and large format printers.[3] This data is then put into preformatted reports that can be quickly viewed or exported for tracking, cost analysis, billing, charge-backs, and business planning.
