

Therefore™ AI Integrations

Intelligent AI integrations from Therefore can help you accelerate your decision making and redefine efficiency by automating routine tasks, freeing your team to focus on high-value, strategic work.

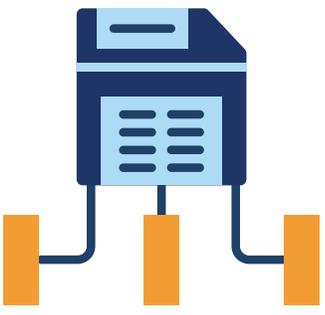

Therefore Smart Capture

Say “No” to manually indexing and processing invoices!

Therefore Smart Capture utilizes artificial intelligence to help extract data from invoices efficiently. This powerful tool can handle a large volume of invoices swiftly, through automated processes designed to reduce the time required for manual entry. By leveraging Smart Capture, organizations can support enhanced employee productivity and efficiency, as the software helps to minimize the errors typically associated with manual data entry. Moreover, Smart Capture offers a cost-effective solution to help optimize invoice processing, so that businesses can streamline their operations. This enables employees to focus on more valuable and strategic tasks while improving overall accuracy.^{1,2,3}

Therefore Smart Capture can help save time, increase accuracy, and free up employees’ time for more engaging tasks.

How does it work?

Simply save the invoice to a Therefore category, and the workflow will take care of the rest, supporting an efficient, streamlined process. The workflow uploads the invoice to be processed, and within moments, users can review the captured index data for quick and easy data validation. Because Smart Capture is AI based, human validation helps the system increase its accuracy and ability to understand new layouts over time. Once validated, invoices can be further processed using Therefore workflows to help optimize efficiency.

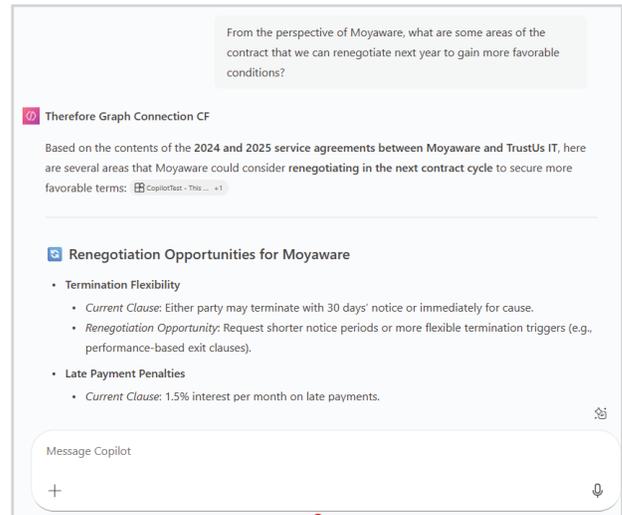

Integration with Microsoft Copilot

Get more done using the AI capabilities of Microsoft Copilot!

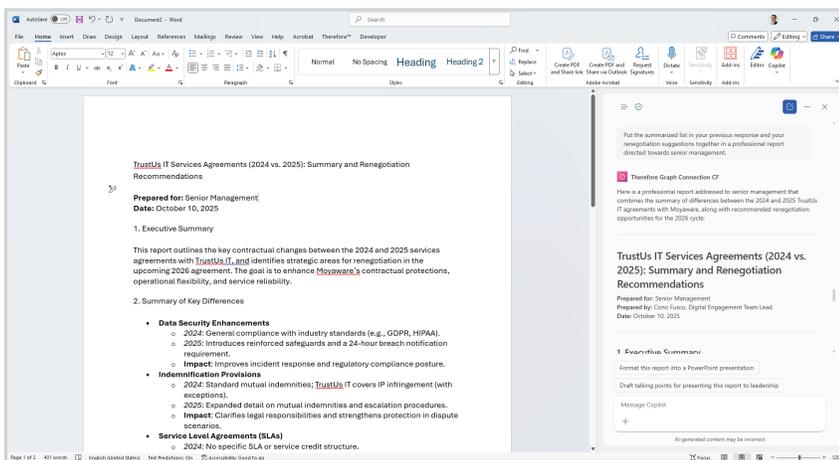

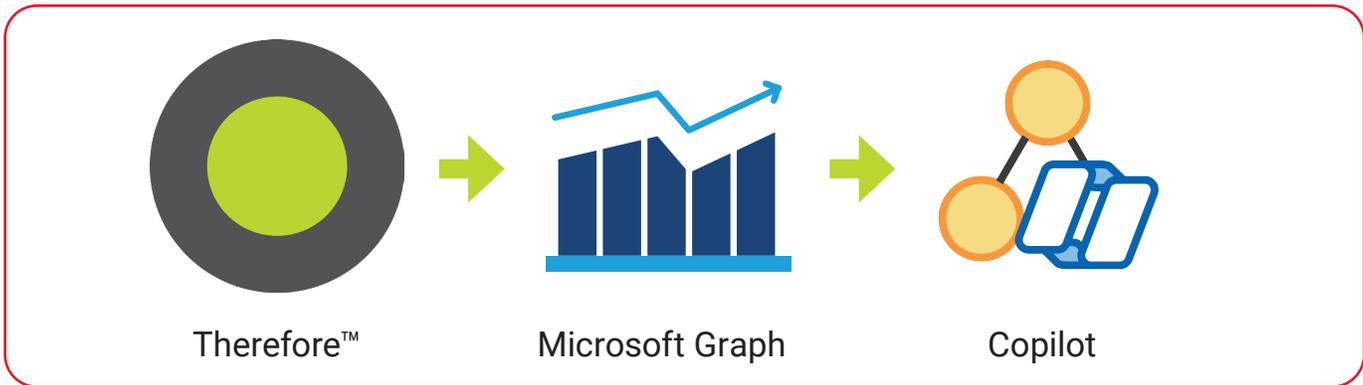

Therefore now offers an integration with Microsoft Copilot, allowing you to leverage AI to gain useful insights about the information you store in Therefore.^{3,4,5}

The possibilities are endless, but here are some ideas of what you can do with Copilot and Therefore:

- Collect job applications using eForms and ask Copilot to help you sort, analyze, and create personalized interview questions for each candidate.
- Get answers that help you understand internal documents like vacation policies, emergency procedures, or SOPs.
- Compare two or more documents and find the differences between them, and ask Copilot to draft a summary to send as an email.
- Ask questions about a large set of documents within a project.

Use the Copilot app to gain insights into critical information stored in Therefore.

Easily access Copilot from the Microsoft applications you use the most, like Word, Excel, PowerPoint, and Outlook.

AI-Based Document Classification with Therefore

Transform your document handling from a manual chore into an efficient, automated process with our powerful integration of Therefore™ and Azure Document Intelligence.^{3,6,7}

Key Benefits

- **Lightning-Fast Classification:** Automatically classify and route documents the moment they enter Therefore™, limiting manual sorting and saving valuable time.
- **Outstanding Accuracy:** Leveraging the cutting-edge Azure engine, documents are correctly assigned to their final destination, ensuring data integrity and reliable compliance.
- **Seamless Workflow Integration:** Classification is built directly into your established Therefore™ workflows, triggering automated routing and subsequent processing tasks.

How It Works

1. **Smart Training:** The classification engine learns from your existing Therefore™ data. Simply provide a minimum of five sample documents per category to start training—the more examples you provide, the higher the classification accuracy.
2. **Instant Routing:** Documents saved into a watched classification category are automatically read, classified, and instantly moved to their final category by the workflow.
3. **Advanced Processing:** Once classified and routed, documents are ready for standard Therefore™ processing, including advanced data extraction using Therefore™ Smart Capture.
4. **Flexible Page Configuration:** For multi-page documents, administrators can determine how documents are classified. Easily configure the system to only analyze the most relevant pages for classification.

For more information, please contact your Canon authorized representative.

¹ An additional purchase of Smart Capture credits is required for Smart Capture functionality.

² Use of the Smart Capture service may require an update to your existing Therefore system. Contact your Canon authorized representative for details.

³ Not all features are available with all editions of Therefore. Contact your Canon authorized representative for details.

⁴ An additional purchase of the Therefore Copilot Connector is required for Copilot connectivity.

⁵ Use of Therefore Copilot features requires a subscription to Microsoft 365 Copilot Business.

⁶ An additional purchase of the Therefore Online Azure Document Intelligence Connector is required for Document Intelligence functionality.

⁷ Use of Document Intelligence features requires a subscription to Microsoft Azure Document Intelligence.
