# UFP

UNIFIED FIRMWARE PLATFORM

Unified Firmware Platform (UFP) allows Canon third generation imageRUNNER ADVANCE, imageRUNNER ADVANCE DX and imagePRESS Lite models to be updated with cutting-edge features, new functionality, and enhanced security measures on an ongoing basis.

Security

Common source code for firmware development for models within the third generation imageRUNNER ADVANCE, imageRUNNER ADVANCE DX and imagePRESS Lite product families.

Consistency

Allows for version upgrades, including additional functionality, to existing models.

Solutions Integration

Helps to continue to increase the value of the device by contributing to continuous feature improvement.

Additional Value

All supported models can be updated to the latest version of the Unified Firmware Platform to utilize the latest features at no additional cost.

# More than **500** feature updates delivered through UFP since its inception in 2016!

These are just a few examples of features that have been added by Unified Firmware Platform.

## Improved OCR Accuracy

Improved optical character recognition of letters on dark backgrounds for more accurate scanning.

## Visual Message

A unique message can be displayed over the screen to act as a screensaver or pop-up in order to communicate information to the user.

## Microsoft Universal Print

Native support for this cloud-based print solution that enables simple and secure printing experiences, while reducing time and effort for IT.

## My ADVANCE Synchronization

Personalized settings can be synchronized with multiple devices on the network. If you change a personal setting on one device, it will automatically update on your other devices.

## SIEM System Integration

Integrates with third party SIEM systems to alert administrators of potentials threats.

## Hot Folders

Drag and drop a file into the hot folder, and it can automatically print with pre-defined settings such as number of copies and finishing requirements.
