[2] Keyboard Water Resistance Testing: Quality tests are conducted under specific environmental conditions in accordance with VAIO standards. Product quality tests provide no guarantee against damage of accidents, nor do they guarantee any data on the PC. In the event that water is actually spilled on your PC, you can send it in for repair or inspection. This test is only for cases where water is spilled on the keyboard and does not assume water intrusion through the exhaust or air intake vents through various ports.

[3] Based on the MIL standard (MIL-STD-810H), VAIO has conducted tests according to some of the test conditions they set themselves to confirm that there are no operational defects in the basic functions. This is done to collect reliability data and does not guarantee that there will be no damage or failure due to drops, impacts, vibrations, or changes in the usage environment.
