

PENETRATION TESTING

Take the First Step to a Better Cybersecurity Posture

What is Penetration Testing?

Penetration testing is an authorized simulation of a cyberattack that evaluates the strength of your IT security. The test is conducted by a team of ethical hackers to uncover any vulnerabilities which can allow unauthorized parties to gain access to your systems. Vulnerability discovery is the cornerstone of cybersecurity and can prevent extremely expensive and damaging breaches.

The cost of
a data breach in the
US in 2024 was

**\$9.36
million***

Reliable Penetration Testing

Unbiased, expert advice from a team of trusted Certified Ethical Hackers

Discover vulnerabilities
and risks in your existing
security investments

Manage risks based on
the recommendations by
a team of experts

Stay compliant with your
Cybersecurity Insurance and
IT security regulations

Advantages of Managed Security

Certified Ethical Hackers

Our team of top-tier professionals hold certifications in CEH, CISSP, CTPRP, ITILv3, and more.

Comprehensive Reporting

We provide a detailed vulnerability report that outlines the areas of concern, in both technical and executive formats, and recommendations to help you address them.

Complimentary Rescan

Complimentary rescan of your environment within three months to validate your team's efforts in remediating vulnerabilities.

Supra ITS, a Canon group company brings a team of accredited and trusted experts who share the knowledge gained across various industries throughout North America.
