

Easily Retrieve Device Counters

The Meter Capture (MC) feature for imageWARE Enterprise Management Console automatically delivers information on how many copies and prints have been output—and in what format (e.g., color, black and white)—from network-connected devices.

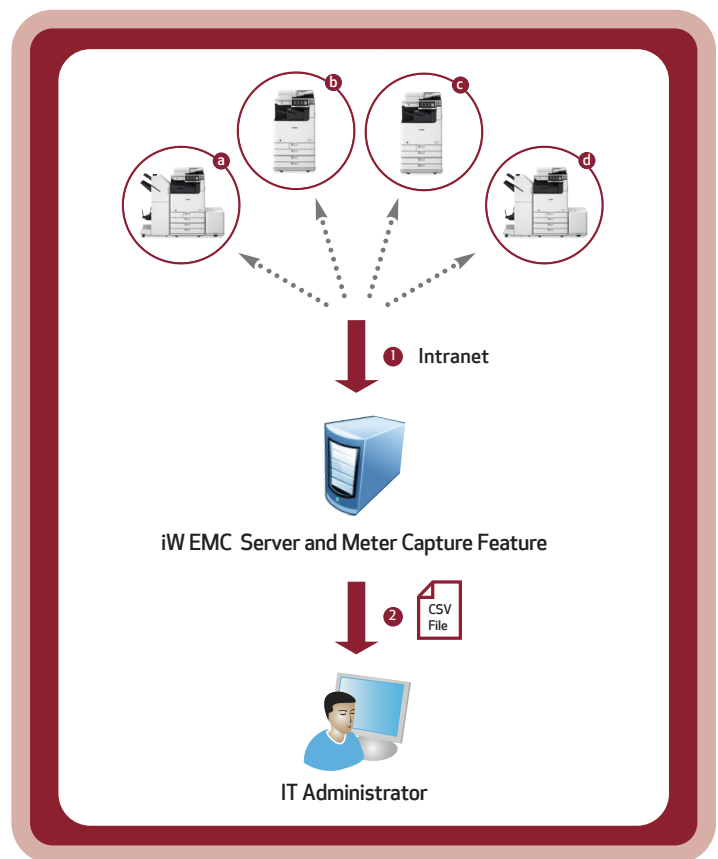

Advantages of MC:

- **Automatically retrieve Canon device meters** at scheduled intervals. This guarantees accuracy and eliminates the time-intensive and error-prone task of physically checking and recording each device's meter count.
- **Save retrieved meters in a CSV file** for easy export, and take meter data in its digital format to the next step.
- **Gather meter data from third-party devices** and manage all Canon and other-brand devices (standard MIB-compliant and total counter) from a single console.
- **Simplify meter retrieval** with easy, task-based functionality and an intuitive user interface.

SYSTEM REQUIREMENTS

The Meter Capture Feature must be used with imageWARE Enterprise Management Console and conforms to the same system requirements.

Meter Capture Feature Workflow

For more information about imageWARE Enterprise Management Console Meter Capture contact your local Canon Authorized Dealer.
