

## **Environmental Profile Sheet**

Canon's imageRUNNER 1643iF/1643i/1643P models incorporate those technologies with a strong environmental focus at every stage of the product life cycle—Produce, Use, and Recycle. The technologies listed below focus on Energy Conservation, Resource Conservation, and Pollution Prevention and form the foundation of Canon's Environmental Management System.

	Energy Conservation	Resource Conservation	Pollution Prevention
In order to help reduce dependence on petroleum-based materials, Canon uses 100% recycled plastics.*		A	
A variety of energy saving features such as Sleep Mode help to <b>minimize power consumption</b> .	1		
Power consumption in Sleep Mode is as low as 0.9 W!	13		
<b>Low Typical Electricity Consumption (TEC) values</b> , which measure power consumption during a one-week period.	1		
Power consumption is reduced by utilizing White LED array technology in its Color Image Reader versus using a traditional Xenon tube!	1		
RAPID Fusing technologies help <b>reduce power consumption</b> and <b>limit the warm-up period</b> .	1		
MS Toner, with its low melting point, helps <b>reduce fusing temperature requirements</b> .	13		
All suppliers are required to meet Canon's stringent Green Procurement policy and environmental terms. This helps Canon exceed the tough European Union's RoHS Directive, which <b>controls/restricts the use of certain hazardous substances</b> .			Ą
Each system is equipped with paper-, toner-, and energy-saving features that help to <b>cut costs</b> and <b>conserve resources</b> .	1	A	
Long-life parts and high-yield supplies help <b>maximize uptime</b> and help <b>reduce the amount of materials consumed</b> during the product life cycle.		J)	A)
