# uniFLOW Online Multi-vendor Compatibility

Designed for business environments of any size, uniFLOW Online can help reduce and allocate printing costs, limit unauthorized access to printed documents, improve office productivity, and enable central control of printing, scanning, copying, and faxing.
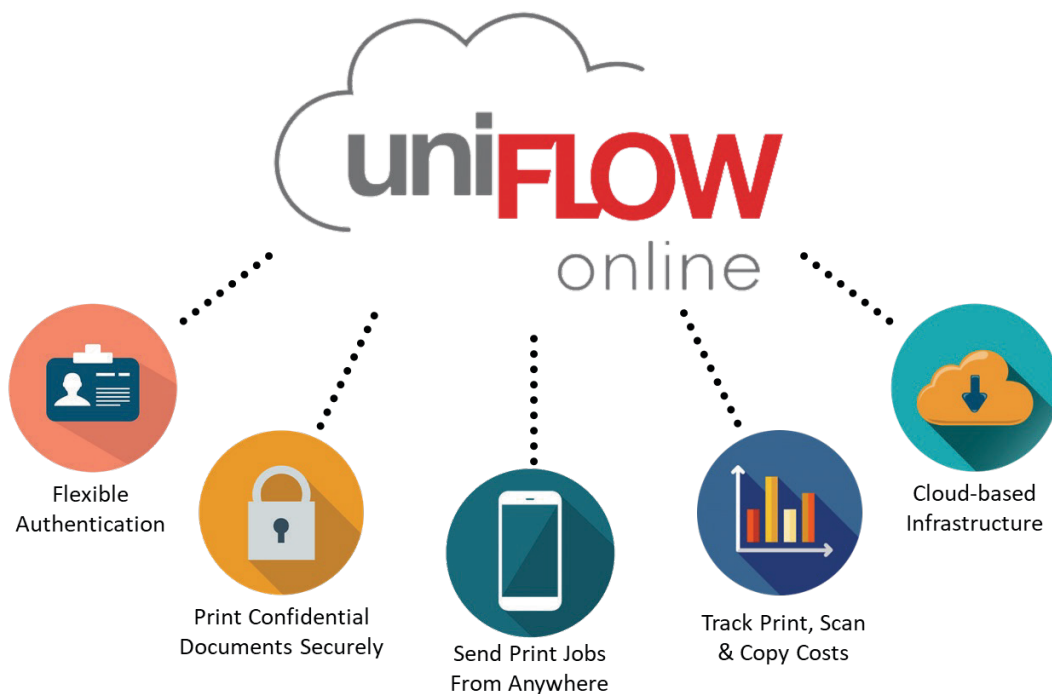

uniFLOW Online is also perfect for mixed-fleet printing environments. A number of print manufacturers support the uniFLOW Online embedded applet, while others may require a uniFLOW Release Station to access control and secure print functionality. Businesses benefit from the flexibility of true "My Print Anywhere" output and increased document security across all platforms. In situations where secure printing is not required, users can print directly to any multi-vendor device, regardless of the model.

Ideal for environments looking for:

- A Cloud-based Print Management Solution
- Print Direct
- Secure Release
- Mobile Printing

A CLOUD-BASED PRINT MANAGEMENT SOLUTION

Printing: uniFLOW Online supports printing to large multifunction devices in the office as well as smaller, all-in-one multifunction and single-function printers in the home. Plus, with Print via Cloud, users can print easily and quickly regardless of the network they're on.
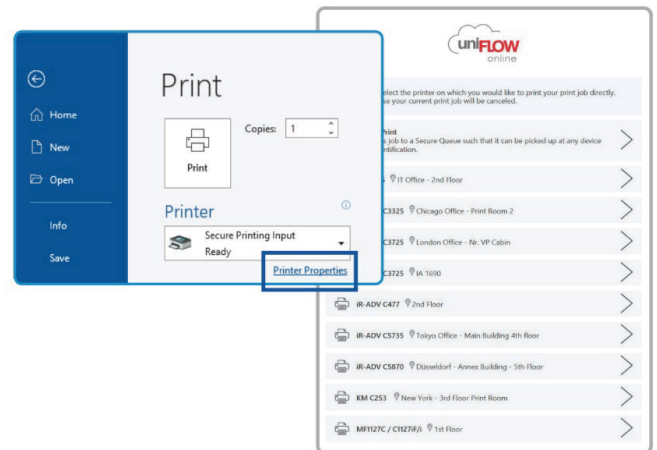

Tracking and Reporting: Employees working from home can print directly from their device—and with immediate job release—while still tracking costs. If the device is in the same room as the employee and it's continuously monitored, secure printing is often not necessary. If, on the other hand, the device is regularly shared with family members, secure printing for company documents can still be implemented. Documents can be released following authentication with a PIN code.

Cloud: An Internet connection is all that's needed for employees to link their supported device to uniFLOW Online. This gives them the dual advantage of staying connected while having the flexibility to work from either their office or home. And with this cloud service, employees are always up to date. uniFLOW Online typically issues three releases a year that offer new or enhanced features. So regardless of location, when uniFLOW Online is updated, so are all users!

PRINT DIRECT WITH UNIVERSAL OUTPUT QUEUE

uniFLOW Online Universal Output Queue helps to reduce the number of print drivers that organizations must manage within their print environments, by enabling direct printing to compatible devices without the need to install device-specific drivers. This is made possible by enhancing the capabilities of the uniFLOW SmartClient and uniFLOW Universal Driver. With uniFLOW Online Universal Output Queue, devices can be integrated as "network printers". This helps to enable direct printing using a single driver and can allow users to direct print from any multi-vendor print device.

UNIVERSAL OUTPUT QUEUE BENEFITS

Boost Efficiency

Save Time

End-User Flexibility

Easy Integration

Intuitive User Workflows

SECURE RELEASE

Using a Release Station or Embedded Applet

The uniFLOW Release Station takes over device access control and secure print functionality and can be connected to most devices. The release station is not always required as some manufacturers have the uniFLOW Online applet embedded. For the manufacturers that do not have the embedded applet, the release station functions as the device user interface for uniFLOW Online. As a fully integrated solution with a card reader, touchscreen, and embedded software, the uniFLOW Release Station provides a single platform for businesses' secure and mobile printing requirements regardless of the type of device being used. Businesses benefit from the flexibility of true "My Print Anywhere" output and increased document security across all platforms.

Current manufacturers that support the uniFLOW Online embedded applet and do not require a release station include:

- Canon
- Xerox
- HP
- Konica Minolta
- Samsung
- Sharp
- OKI
- Brother
- Lexmark
- Epson

Using Mobile Release with QR Code Identification

Customers also have the option for secure release—without a release station—with mobile release. Users simply print out the mobile release QR code and individually place it on the devices. Easily scan the QR code at the device with smartphones or tablets and release jobs. For the full user interface experience, a release station is required.
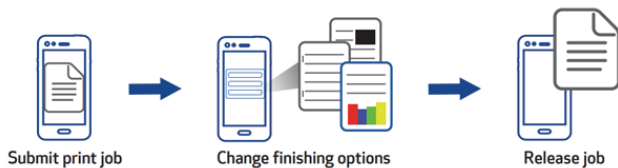

MOBILE PRINTING

Send print jobs from anywhere. Regardless of location or manufacturer device, uniFLOW Online allows users to utilize their smartphones or tablets to print documents. More than 40 document and image file types can be converted. This allows documents to be printed quickly on the go, just in time for the next meeting. There are four ways to use mobile and guest printing with uniFLOW Online.
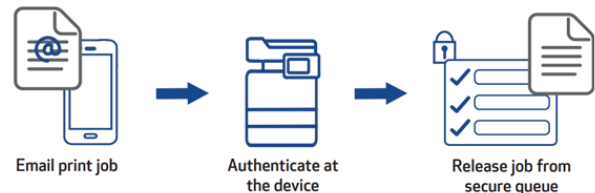

uniFLOW Online Print & Scan App

Submit print jobs through the mobile app by uploading a picture. Release print jobs securely by scanning a QR code displayed on the user interface for touchless print operation.

Submit print job → Change finishing options → Release job

Email Printing

After emailing a print job to the device from an authorized email address, the job will appear in a user's secure print queue. Once authenticated, the user sees a list of print jobs.

Email print job → Authenticate at the device → Release job from secure queue

Mobile Printing for Guests

Provides a secure print email address for guests. After a print job is sent, users receive an email with instructions on how to retrieve their job using a secure temporary job code used to authenticate at the device.

Guest emails print job to guest email address → Guest receives a job code/PIN via email → Guest enters code at MFP to access the secure queue and release the job

Web Upload

Mobile workers can also submit print jobs by uploading documents to a secure website. The uploaded files will be added to their personal print queue and the job name will match the name of the uploaded file.

Drag and drop print jobs to the website → Authenticate at the device → Release job from the secure queue

uniFLOW ONLINE SUBSCRIPTIONS

uniFLOW Online – Cloud Print & Scan: Cloud Print & Scan enables users to print confidential documents securely and offers additional features such as mobile printing, My Print Anywhere, and the Universal Output Queue. In addition, this solution includes basic scanning capabilities that allow users to capture documents and distribute them to multiple destinations. With Cloud Print & Scan, customers receive a subscription package that enhances both document security and office productivity.
