

Top Five Reasons to Use uniFLOW Online in a Hybrid Work Environment

1 Users Can Submit Print Jobs from Anywhere.

uniFLOW Online supports printing to large, multifunction devices in the office as well as smaller, all-in-one multifunction and single-function printers in the home, making for a smooth transition between the two work environments. Plus, with Print via Cloud, users can print easily and quickly, regardless of the network they're on.

2 Consolidated Reporting, No Matter Where the Devices are Located.

uniFLOW Online allows employees to seamlessly print and scan documents, whether they're working from the corporate office, their home office, or a combination of both. With a variety of reports, organizations can gain access to comprehensive tracking and reporting of their organization's printing, scanning, and copying across all locations within the uniFLOW Online dashboard – no matter where the device is located.

3 New or Enhanced Features Without Additional Costs or Installations.

An Internet connection is all that's needed for employees to link their supported device to uniFLOW Online. This gives them the dual advantage of staying connected while having the flexibility to work from either their office or home. Moreover, employees are always up to date with this cloud service, regardless of location. uniFLOW Online typically issues three to four releases a year that offer new or enhanced features, so when uniFLOW Online is updated, all users are, too!

4 Scan Workflows Follow Users.

Whether at work or at home, scan workflows follow employees from device to device. A similar user interface and scan profiles are available at the home office as well as the workplace. With uniFLOW Online's innovative cloud technology, conversion to Word or searchable PDF and file compression are also available before the document is sent to the user's email or saved to Box, Dropbox, Evernote®, Google Drive™, Microsoft OneDrive®, or Microsoft OneDrive® for Business.

5 Keeping Evolving Workplaces Flexible.

As businesses shape their cloud strategy and adjust to the increase of mix-and-match work locations, they need solutions that give them flexibility and cost advantages. uniFLOW, in hybrid mode, allows central management of both the server and cloud locations. It enables the flexibility to take advantage of on-demand cloud resources while simultaneously satisfying sophisticated security requirements and business process workflows.

Canon products offer certain security features, yet many variables can impact the security of your devices and data. Canon does not warrant that use of its features will prevent security issues.
